# INVITATION

Welcome to our 61st Annual Sale Catalogue and thank you for taking the time to read through it.

Thank you also to those of you who return to purchase our cattle regularly. Your support is very much appreciated and gives us the incentive to continually improve our herd.

On a personal note, our family recently lost a person very special to us. Mike Atthow, husband of Dad's sister Mary Ann, passed away on August 1st. We will miss Mike's friendship at family gatherings and I will personally miss his wise words on Sale night when we sit down to discuss how the day went. To Annie, Ian

and Donna, Jack, Dan and Hugh, and Holly and Dick our thoughts are with you.

World demand for food is very high and set to increase over time. Things certainly look positive for the current and long term strength of the Australian beef cattle industry.

As beef producers, a number of variables are out of our control and we can burn up a lot of energy worrying about them. Genetics, however, is one thing we can have full control over. Knowing that a sire purchased today potentially will have an influence on your herd productivity and profitability for one to two decades, it is important that good decisions are made.

There is no denying the popularity of Santa Gertrudis cattle in feedlots and backgrounding operations due to their feed conversion and growth rates. Our mission has been to further increase these traits while making sure bigger numbers of calves hit the ground, consistently.

At Rosevale our focus is firmly on breeding cattle that are profitable across a range of environments, measuring their performance fully and offering all of this information to interested buyers.

We feel that the strict selection pressure we have put on our herds over the past two decades is paying ever-increasing dividends. The genetic gains we are making through careful selection means that as a group, our bulls are genetically more fertile, growthier,

musclier and quieter than ever before. Buyers can be confident that much work has been done to ensure they are getting better bulls each year.

This year we have carried out Horn/Poll testing on our sale bulls for the first time. We are proud to offer 20 bulls who have tested as homozygous polled (PP).

Also, for the first time since BJD restrictions were enforced, Rosevale cattle are eligible for entry into WA. It is satisfying to once again make our cattle available to WA breeders who have had success with our genetics through the years.

Toby has put together a youtube video that previews our 2017 Sale draft. This will give you a good idea of the bulls and the paddocks they are currently running in. Details of this, along with additional sale lot photos, will be posted on our website [www.rosevalesanta@bigpond.com](http://www.rosevalesanta@bigpond.com).

We recommend our cattle to you. If you would like to discuss anything regarding our herd or would like to view our sale cattle prior to sale day, please do not hesitate to contact us.

We look forward to seeing you at our 61st Annual Sale.

**Kind Regards  
David Greenup**

**Grahame & Peggy**

**Sam, Seb, Sonya, David & Toby**

## Family & Country:

Rosevale and other properties are owned and operated by David and Sonya Greenup in conjunction with David's parents Grahame and Peggy. David and Sonya's three sons Sam, Toby and Seb represent the 6th generation of the family to live and work at Rosevale.

A total of 700 Stud and 700 Commercial cows are mated annually for a three-month period. The properties consist of a range of country varying from forest country where breeders are run to fertile scrub soils where young and turnoff cattle are run. Forage crops are grown for growing and fattening stock.

## The Stud Herd:

The Rosevale Santa Gertrudis Stud was founded by George and Heather Greenup in 1953 with the purchase of KRT Elation 35(Imp.) at the second King Ranch Sale. Elation was introduced into the Rosevale commercial Shorthorn herd that had been in operation for 90 years.

Since its inception, the Rosevale Stud Herd has been managed in a similar manner to its Commercial Herd. The distinct lack of pampering has meant the herd has evolved into a 'naturally selected', easy care mob of breeders.

Through the 1970's, 80's and 90's the Rosevale beef type was highly regarded and reinforced by many wins in Prime Cattle competitions against steers of both British and European breeds. While retaining this type, the last decade has seen a higher breeding consistency in our herds and resulting lower cull rate in our bull calves. In addition, the demand for our bulls as sires has meant that the animals that once were our top show steers are now being sold as bulls. For these reasons we have not been as active competing in prime cattle competitions.

Our concentration on bull fertility was ramped up in the 1990's with annual Serving Capacity tests being carried out. Upon seeing that the bulls with trimmer sheaths were the more successful servers in addition to them having longer working lives, we made it our mission to make this trait a

priority in our selection. Rosevale bulls are now well recognised as being clean sheathed, efficient serving animals.

The 1990's also saw us fully commit to performance recording through Santa Gertrudis Group Breedplan. Rosevale now boasts one of the most extensively performance recorded herds in northern Australia. Bulls such as Tyndale Noddy(P) helped take the growth and carcass performance of our herd to new levels while retaining the trim underlines and other visual traits we had been selecting for.

Our focus over recent times has been to diversify blood lines while concentrating on consolidating the old Rosevale beef type in an animal that outperforms its predecessors across a wide range of traits. Fertility in both bulls and females has always been Priority #1 with the use of Pregnancy and Semen Morphology testing forming critical roles in the selection of highly productive cattle.

## Rosevale Red Beef Bulls:

Santa Gertrudis form the base of our commercial herd with small infusions of both British and European genetics being added over time. Like the Stud Herd, these cattle are strictly selected for fertility in combination with high performance.

The aim is to breed extremely fertile, high growth, clean sheathed, polled Red Beef Bulls whose progeny are fast growing to a saleable weight and meet market specifications easily off pasture at an early age.

While these bulls do not have Breedplan EBVs, they are extensively measured across a range of traits and can be directly compared with their Rosevale stud counterparts. The performance of these cattle is extremely satisfying and they offer a hit of hybrid vigour along with a genetic outcross to the purebred bulls we offer.

Some people question the breeding ability of composite bred bulls. The allround performance of the progeny of these bulls has convinced us that these cattle are the real deal – they will get the job done.

# SALE INFORMATION

## Sale Bull Preparation:

Our policy at Rosevale is to prepare our sale bulls solely on pasture and forage crops, whenever possible. Variation in seasonal conditions and high stocking rates in recent times has meant we have had to supplementary feed our bulls at times in order to keep them growing.

We run our young bulls in big mobs for performance recording reasons and in order to rotate pastures. This means a lot of riding and fighting goes on. This is especially evident when the bulls get hungry and we lose a number of bulls due to injuries sustained when this occurs. We are mindful that we need to have our annual sale bulls growing at around 1kg/day. In order to achieve this level this year the sale team has been supplementary fed for periods while grazing green panic pastures.

With the use of Universal feeders and modifications to traditional style feeders, we continue to run our bulls in large pasture paddocks and are able to restrict them to gaining 1kg/day. This is a similarly steady gain to what is expected on good quality pasture and in no way compromises the future soundness and fertility of the bulls. We thank Will Robinson from PPS Beef for his assistance in this area.

We do think it is important, however, for the bulls to be offered off pasture only at saletime, with their guts set up ready to handle grass from day one. While we have had little rain during the Winter this year, the bulls are currently on good oats. This could quite possibly tail off by sale day but we will have the bulls ready to go, albeit with a little less weight gain than they may have had.

**We look forward to offering a mob of bulls that will certainly be fit and set up for long, productive working lives.**

## Breeding Soundness:

All sale bulls will be breeding soundness evaluated by veterinarian Mr Peter McAuliffe and Mr John Bertram. This evaluation involved an examination of the internal and external reproductive organs of each bull and a semen morphology test. Scrotal circumferences will be measured using a Coulter Scrotal Tape. Relevant information following this evaluation will be available prior to sale day.

## Guarantee:

All bulls sold are guaranteed fertile. If there are any issues with your purchases please don't hesitate to call us. We want the bulls to work just as much as you do and are more than happy to work with you toward an acceptable resolution if there is a concern.

## Health/Vaccinations:

The Rosevale herd has a current BJD status of J-BAS-7. The herd is tested free of BJD - cattle are eligible for entry into WA.

The Rosevale herd is accredited TB and Brucellosis free.

All bulls will receive Three-Day Sickness, Vibrio and 7-in-1 vaccinations prior to the sale.

All bulls have been vaccinated (as weaners) for Tick Fever with Three-Germ Blood.

Sale Females have received 7-in-1 vaccine and Three-Germ blood.

Vaccination dates will be available on sale day.

## Inspection:

Sale stock will be yarded for inspection from 8am on the morning of the sale. The cattle may be inspected at any time prior to the sale by arrangement with the Greenup Family.

## Supplementary Information:

Supplementary sheets available on sale day will include sale weights, average daily liveweight gains, scrotal circumferences and semen morphology results. Sale supplementary sheets will be available on our website at [www.rosevalesanta.com.au](http://www.rosevalesanta.com.au) from the Saturday prior to the sale. If you would like this information emailed or faxed to you please contact the Greenup Family and leave your contact details so that we can forward this to you.

## Outside Agents Rebate:

The vendors agree to pay a 3% rebate to outside agents who:

1. Introduce buyers in writing to the Greenup Family or the operating agents at least 24 hours prior to the sale; and
2. Pay invoices in full by 5.00pm on Friday October 6, 2017.

**Rebate WILL NOT be allowed outside these conditions.**

## Delivery:

We take personal interest in the efficient and safe delivery of all lots after the sale. All lots not loaded on sale day go back into their paddocks in the mob they have been running with. Sale agents have the responsibility of organising transport and will endeavour to group lots together in loads to make delivery as economical as possible.

## HORN/POLL TEST

For the first time at Rosevale, those bulls with the possibility of being homozygous polled (PP) have been Horn/Poll tested through Zoetis.

20 bulls catalogued in the sale have tested as homozygous polled (PP) which means that they possess two copies of the poll variant of the gene. This means that these bulls are highly likely to pass a poll variant to their progeny. In short, **all of their progeny should be polled**.

**The following lots are homozygous polled (PP):**

**2, 4, 6, 15, 25, 30, 36, 42, 50, 65, 88, 91, 92, 98, 113, 114, 124, 128, 154 & 155**

## BIG RED SANTA WEEK

The 61st Annual Rosevale Sale forms part of an exciting run of four Santa Gertrudis bull Sales. Dubbed the “**BIG RED SANTA WEEK**”, over 400 bulls will be offered over a three day period.

We look forward to welcoming visitors to the series of sales which offers prospective buyers the opportunity to view a large number of bulls in a short period, confident of obtaining the bulls they need without the extra costs associated with attending sales that don't follow each other.

Also, the fact that these sales will be held late in September means that the bulls are being offered closer to the time when most producers need them.

## SALES INVOLVED IN THE BIG RED SANTA WEEK

Mon Sept 25th am - Dangarfield, Taroom

Mon Sept 25th pm - Wandoan SG Bull Sale, Wandoan

**Tues Sept 26th - Rosevale, Jandowae**

Wed Sept 27th - Santa Central, Nobby

## SIRE

## ROSEVALE JETHRO J208 (PS)

**Rosevale Jethro J208(PS)** is a new season sire who has bred extremely consistently. This breeding consistency is demonstrated by the fact that he is the dominant sire in this catalogue with 24 naturally-sired sons represented.

The performance data that he has is at a high level across all traits. This, combined with his reproductive and structural soundness means that he will match almost any cow he is mated to.

The extra finishing ability he displays, which is highlighted in his Fat EBVs, is typical of the Brahman base he is bred up from. His dam, who was a third-cross grade-up cow, had four sons sell to average \$10,000.

The Jethro sons are generally a little plainer to look at than the Jackaroo's but check their performance - they are real money making sires.

**Represented by Lots 7, 10, 13, 19, 21, 22, 24, 32, 34, 42, 45, 46, 68, 73, 82, 87, 90, 91, 98, 102, 116, 117, 122 & 147.**

## SIRE

## ROSEVALE JACKAROO J566 (P)

**Rosevale Jackaroo J566(P)** is an exciting new season sire by Strathmore Cowdrey F672(P) out of a high growth Atomic female.

The natural balance and eye-appeal of his progeny are features and combined with powerful performance, make them standouts in their mobs. The structural and reproductive soundness they possess means that they stand a good chance of living long, productive lives.

Jackaroo's Fat EBVs rank him in the top one percent of the breed for finishing ability. This is a trait we very much want to retain in our herd for a number of reasons - for cow breeding longevity, ease of finishing carcasses off in a range of conditions, and the eye appeal and healthy look that these types of cattle display (whatever the season) when selling them as feeders. Both Jackaroo and Jethro are ideal examples of the doing ability we believe we need in all of our cattle.

Two Jackaroo sons have been retained as sires from this drop.

**Represented by Lots 3, 4, 6, 12, 14, 75, 88, 151, 158 & 162.**

## SIRE

## ROSEVALE EMPIRE E464

**Rosevale Empire E464** is a leading sire at Rosevale producing slick coated, high performance progeny that are both structurally and reproductively very sound. His progeny have a high classification rate which is a result of the performance and soundness that is evident in his calves. At nine years of age he is sound as a bell and stands out in our mob of sires.

Empire's high \$Indexes are driven by his all round performance. He is currently one of the top ranked Santa Gertrudis sires for Export \$Index while his dam is currently the highest ranking animal in the breed for this \$Index with a measure of +\$70.

Empire is our Fertility King. Although he is horned, the fertility record of both he and his progeny, make him an integral part of our sire battery. He is an extremely fast calf-getter, his daughters are breeding well as is shown by his Days to Calving EBV, and his sons typically average close to 90% Normal in semen morphology tests.

42 of his sons have sold to a top of \$18,000 (Empire K40(P) to the Speed Family's Brigadoon Stud) to average \$8,380.

**Represented by Lots 18, 35, 43, 57, 58, 96, 97, 104 & 105.**

## SIRE

## ROSEVALE HANOVER H402 (PS)

**Rosevale Hanover H402(PS)** is a Ulysses son out of a Quilpie W308 blood cow. The hit of W308 blood gives Hanover higher growth than his sire.

Reproductively, Hanover's sheath is perfect and he returned a semen morphology result of 88% Normal at nineteen months of age. Structurally he is very sound with good mobility. He is an easy doing bull and his coat type is particularly good. It is the eye-appeal and natural balance of his progeny that make them stand out in their mob. In our private sale bull mobs each year they have been some of the first to sell.

The soundness and resulting longevity that the Hanover sons possess is not measured directly but is invaluable in regards to driving herd profitability.

**Represented by Lots 2, 41, 47, 51, 53, 92, 106, 115, 123, 129 & 155.**

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

## SIRE

## ROSEVALE JUSTICE J450 (PS)

**Rosevale Justice J450(PS)** is another of our exciting first season sires. Because of his sire appeal and performance data he has been admired by many.

He is long bodied and possesses the thickness and muscle pattern typical of his Crackerjack sire line. In addition, his dam has been one of our most fertile breeders (from the Beaumon line). She has only just pulled up breeding, having had fifteen calves in fifteen years, her first as a two-year-old. This genetic strength is displayed in Justice's Days to Calving EBV which ranks him in the top five percent of the breed.

Along with Jethro and Jackaroo, this bull is laying an extremely solid foundation for the next generation of Rosevale sires.

**Represented by Lots 16, 31, 74, 94 & 161.**

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

## SIRE

## WIGHTFIELDS DOWNPOUR G21 (P)

**Wightfields Downpour G21(P)** has been a powerful sire in our herd for a number of years now. Balanced, high performance across the traits which is led by growth and muscle expression, results in Downpour's high \$Indexes.

His daughters are breeding well, as is shown by his negative Days to Calving EBV. While his progeny excel for muscle content, they are easy doing cattle that fatten easily - a combination of carcase traits we aim to breed in all our cattle.

In the last two years 42 of his sons have sold at our annual sale to average \$11,916. These include King K88 who sold to the Cree Stud for \$70,000 (Rosevale record), Downpour L238 who topped our sale last year selling to the Swan Hill Stud for \$40,000, and Ludlow L548 who sold for \$28,000 to the Michelmores Family.

**Represented by Lots 9, 11, 25, 52 & 165.**

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

**SIRE****ROSEVALE JUNGLE JUICE J184 (P)**

**Rosevale Jungle Juice J184(P)** was a high growth bull out of the dam of King K88 who sold to the Cree Stud for a Rosevale record of \$70,000. She is one of our top breeders, having calved first as a two-year-old, has had eight calves and is PTIC. Six classified S progeny to date include Major L520(P) who features as a Future Sire in this catalogue.

Like King, Jungle Juice was judged as Champion Bull at the Santa Gertrudis National Junior Show as a yearling. He was retained as a sire for one season. He was catalogued to sell in our sale as a three-year-old but unfortunately broke his back leg in a fight just prior to the sale and had to be put down. As a result, the bulls catalogued this year will be his only sons to sell.

**Represented by Lots 5, 15, 111 & 112.**

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

**SIRE****ROSEVALE ATOMIC F120 (P)**

**Rosevale Atomic F120(P)** is a son of Rowanlea Atomic(P) and is still breeding at eight years of age.

His progeny exhibit the typical early maturity of the Atomic line. They stand out as weaners but are deceptively heavy later in life while not being tall in frame. They are slick, dark coated cattle with extra thickness. The consistency of his progeny is a feature - they can be easily recognised in a mob.

21 of his sons have sold at auction to average \$9,047. These include Kokomo K68(P) who sold for \$20,000 to the Wightfields Stud and Atomic L104(P) who sold to the Glen Rufus Park Stud for \$15,500.

**Represented by Lots 33, 38, 40, 113 & 120.**

**SIRE****RAYTEK DEMOCRAT (PP)**

**Raytek Democrat(PP)** is a homozygous polled bull as the (PP) next to his name suggests. He was found dead one off-season following his use in our herds for a number of years. His sons in this sale represent the last of his calves.

High growth and muscle expression, as confirmed by his EBVs, are features of his progeny. They also exhibit tropical coat types and possess an eye-catching appeal.

Nineteen of his sons have sold at auction to date to average \$6,052. Topping this group was Democrat G268(P) who sold to the Gylanda Stud for \$13,500 and Jaegerbomb J646(PS) who sold to the Cooina Stud for \$11,000.

**Represented by Lots 1, 17, 44 & 99.**

## SIRE

## EIDSVOLD STATION FEREMONE

**Eidsvold Station Feremone** is a squarely made bull who possesses high performance across a range of traits.

Heavy weights due to length of body and good muscle expression is a feature of the Feremone progeny who are quiet in nature and reproductively sound. Feremone himself is sound and holds his condition well. His calves generally lack a bit of eye-appeal but their combination of traits will no doubt lay a solid platform for the next generation of high performance cattle.

Fourteen of his sons sold at auction to date have averaged \$7,357. The top seller has been Feremone K502(P) who sold for \$13,000 to Clayton Boon.

Represented by Lots 23, 28, 29, 37 & 89.

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

## SIRE

## ROSEVALE EXODUS S9 (P)

**Rosevale Exodus S9(P)** was born twenty-five years ago and has been brought back into our herd as a sire through IVF.

In our search for proven sires that would build on the high fertility of our best females, while retaining a balance of performance across all traits, S9 was one of two sires we decided on. Very few sires are standing the test of time.

Females by Exodus S9(P) had extremely high fertility and lived long, productive lives. His progeny are dark in colour and have slick, fine skin types. While he weighed over 1,200kg at maturity, his calves are born noticeably small. This is reflected in his low 200-Day weight EBV which is a result of the small start his calves get.

Represented by Lots 27, 36, 56 & 119.

## SIRE

## ROSEVALE JEREMIAH J766 (P)

**Rosevale Jeremiah J766(P)** is a grandson of ABC A1061(P) who is possibly the best composite bull we have used in our Commercial Herd.

Jeremiah is a model of the 'Red Beef Bull' that we are aiming at producing. He is long bodied, deep flanked and wide in his make-up. There is a lot of meat in him but he is an extremely easy doer to go with it. He returned a 94% Normal semen morphology result as a two-year-old.

Jeremiah is breeding very consistently. His progeny possess the same body as he does and are very quiet natured. We look forward to many more years of service from him.

Represented by Lots 67, 85, 135, 137, 138, 144, 145 and 149.

 Adjusted Performance	200D Wgt Rank	400D Wgt Rank	600D Wgt Rank	400D SS cm	400D EMA cm <sup>2</sup>	400D Rb Fat mm	400D Rp Fat mm	IMF %	Flight Time
	47/86	238/429	44/152	32	75	3	3	2.6	1.42

## SIRE

## ROSEVALE HAMBURG H750 (P)

**Rosevale Hamburg H750(P)** is another sire who was bred in our Commercial Herd. He is purebred in blood with his pedigree going back to Rosevale Zeppelin Z490(P).

Hamburg's sons are slick coated and long bodied with particularly long neck extensions. He was one of the high growth bulls of his drop and his semen morphology test results have been consistently high, annually. This is a trait we demand in our sires. To stay in the herd they must test well each year. Hamburg shows extra tropical content and is the type of bull who crosses well with our females with a little more composite content in them.

Represented by Lots 71, 118, 126, 127 & 142.

 Adjusted Performance	200D Wgt Rank	400D Wgt Rank	600D Wgt Rank	400D SS cm	400D EMA cm <sup>2</sup>	400D Rb Fat mm	400D Rp Fat mm	IMF %	Flight Time

## SIRE

## ROSEVALE EMPIRE H12 (P)

**Rosevale Empire H12(P)** is a polled son of Empire E464, out of a grading-up female who had seven calves in seven years before being culled for age.

He is a compact, thick set, early maturing bull who is consistently breeding meaty calves for us. He passes on the signature Empire sheath and high %Normal semen morphology genetics to his progeny.

Note that because the performance of his progeny who are bred in our Commercial Herd, is not processed through Breedplan, his performance figures have a similar accuracy to what they did when he was a two-year-old.

Represented by Lots 83, 128, 139, 143, 146 and 148.

## SIRE

## ROSEVALE E962 (PS)

**Rosevale E962(PS)** is a son of ABC A1061(P) who is possibly the best composite bull we have used in our Commercial Herd.

E962's calves are super deep and big volumed - traits that are typical of this bloodline. What impresses us about these cattle is their wide, deep hindquarters and sheer body volume. These features are combined with a softness that enables the females to retain the maternal characteristics to be breeders with high fertility and longevity.

E962 was a particularly sound bull and has only just finished working at nine years of age.

Represented by Lots 54, 55, 79, 132 & 134

 Adjusted Performance	200D Wgt Rank	400D Wgt Rank	600D Wgt Rank	400D SS cm	400D EMA cm <sup>2</sup>	400D Rb Fat mm	400D Rp Fat mm	IMF %	Flight Time

## FUTURE SIRE

## ROSEVALE KOKOMO K68 (P)

**Rosevale Kokomo K68(P)** is sired by Rosevale Atomic F120(P) and was retained as a sire for one season before selling to the Wightfields Stud for \$20,000 last year.

He possesses the high performance across all traits that we are aiming at in our herd. Like most of our sires, his dam has been a prolific breeder - she has just finished breeding after rearing eleven calves in eleven years, the first as a two-year-old.

Kokomo is a quiet natured, very sound footed bull. His broad, masculine head and doing ability are features.

His sons will sell in 2018.

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

## FUTURE SIRE

## ROSEVALE KATHMANDU K74

**Rosevale Kathmandu K74**, like Kokomo, is sired by Rosevale Atomic F120(P). He was retained as a sire for one season before selling to the Franz Family from Manumbar for \$13,000 last year.

Kathmandu is an early maturing bull who displayed extremely explosive growth - he weighed 920kg, off pasture at 23 months of age. While short in the legs, his body length and width resulted in his heavy weight. Typical of the Atomic line, he holds his condition easily and combines this with extra muscle expression and a herd-improving sheath.

His dam has had six calves in six years and is PTIC.

His calves are weaners and will be offered in 2018.

## FUTURE SIRE

## STRATHMORE KEVLAR K674 (P)

**Strathmore Kevlar K674(P)**, sired by Warenda Regret, was purchased for the top price of \$28,000 at the 2015 Strathmore Sale. He was to be retained as a sire in the Strathmore Stud and was a late inclusion in the sale. His solid raw performance, balance and sire appeal impressed us.

It is early days for his performance data and it is expected that changes will occur over the next five years because his dam is recorded as Multiple and very little of his own performance was recorded.

All of his calves have been polled so, although not tested, we are fairly sure that he is homozygous polled. Kevlar's progeny look promising and have measured up well in our weaner mobs. He offers outcross genetics to our herd and will be prominent as a sire in our 2018 sale teams.

	34%	78%	71%	73%	64%	67%								

## FUTURE SIRE

## GYRANDA KUNG FU K146 (PS)

Gyranda Kung Fu K146(PS) was purchased as the top priced bull at the 2015 Gyranda Sale.

He is an easy doing, polled bull with adequate growth. His stand-out feature is his fertility data. Out of a cow who has had nine calves straight and by Rowanlea Duntroon D24(PS) who possesses a breed-leading Days to Calving EBV, we expect Kung Fu to breed particularly fertile females, consistently.

He is very sound in his feet and legs and returns very high %Normal semen morphology tests.

We expect Kung Fu to breed a strong maternal line, with his daughters forming a solid base for the next generation of high performance Rosevale sires.

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

## FUTURE SIRE

## KULOOMBA PETER (P)

Kuloomba Peter 444(P) is an exciting new sire who is unrelated to any of our cattle so offers outcross genetics to our herd. He was bred by Robert and Julie Vise from Victoria and purchased at the Tamworth Breeders Sale for \$57,000 - the second top priced Santa Gertrudis bull sold in Australia in 2016.

While he has no Breedplan performance data at this stage, his raw performance, natural balance and sire appeal give us confidence in his breeding potential. He weighed over 1,000kg as a two-year-old and displayed superior carcase characteristics. He is built on a super thick, long bodied frame. His extra muscle expression is a feature and he combines this with a high degree of finish - traits that often don't come in one package. Peter has settled his cows well and we eagerly await his first calves in the Spring.

## FUTURE SIRE

## ROSEVALE MAJOR L520 (P)

Rosevale Major L520(P) is a combination of two of the breed's leading animals - by the proven sire Wave Hill Major(P) out of Rosevale Jade D175 (the dam of the \$70,000 Rosevale King K88 and Jungle Juice J184(P) who is a sire of bulls in this catalogue).

The proven performance of his parents gives us confidence that Major L520(P) will breed very consistently. His powerful pedigree and his own performance has resulted in his high \$Indexes that currently rank him in the top one percent of the breed for both the Domestic and Export markets.

We now have a number of sires in use in the stud that offer high performance across all traits. This gives us flexibility when considering mating options in the herd and is resulting in vast improvements across a wide range of traits each year.

Major L520's first calves will be born this Spring.

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

# HOW TO READ THE CATALOGUE

Included in this year's catalogue are two main types of data:

## 1. Rosevale Adjusted Measurements

The following abbreviations are used:

200D Wgt Rk	=	Rank in group, weaning weight adjusted to 200 days (e.g. 5/100 means the bull was the 5th heaviest out of 100 bulls in his group)
400D Wgt Rk	=	Rank in group, yearling weight adjusted to 400 days
600D Wgt Rk	=	Rank in group, weight adjusted to 600 days
400D SS	=	Yearling scrotal size adjusted to 400 days
500D EMA	=	Yearling eye muscle area adjusted to 500 days
500D RbFat	=	Yearling rib fat depth adjusted to 500 days
500D RpFat	=	Yearling rump fat depth adjusted to 500 days
IMF%	=	Intra-muscular fat percentage as yearling
Flight Time	=	Measured time over short distance leaving crush at 400 Days
NA	=	Not available because this trait was not measured

We have adjusted the above measurements to common ages for two reasons. Firstly, it makes it possible to easily compare the measurements of cattle of different ages. Secondly, it gives buyers the opportunity to compare bulls without EBVs with those that do have EBVs.

**For animals that have both adjusted measurements and Breedplan EBVs, we believe that more emphasis should be placed on the use of the latter. This is because Breedplan EBVs help account for environmental differences, performance of relatives, and individual performance in correlated traits, whereas adjusted measurements do not.**

## 2. Santa Gertrudis Group Breedplan EBVs:

These figures are displayed in the table that includes the Santa Gertrudis Group Breedplan logo. The figures in the first line are EBVs. The percentages in the second line are accuracies - they give an indication of the amount and quality of data that is accounted for in the EBV.

The following abbreviations are used:

200D Milk	=	200 Day Milk
200D Wgt	=	200 Day Growth
400D Wgt	=	400 Day Weight
600D Wgt	=	600 Day Weight
Mat Wgt	=	Mature Weight
SS	=	Scrotal Size
D to C	=	Days to Calving
EMA	=	Eye Muscle Area
IMF	=	Intra-Muscular Fat

**In the Dam's History on each Lot, the following abbreviations are used:**

PTIC	=	Pregnancy Tested In Calf
PTE	=	Pregnancy Tested Empty

**RAYTEK DEMOCRAT (P)**

RAYTEK BIMBO (P)

HARDIGREEN PARK BOON

**ROSEVALE BORONIA A181**

ROSEVALE (BORONIA) U404

**Boronia A181** has had nine calves in nine years and is PTIC. Five of these have classified S while a herd bull son sold to Rob and Alex Taylor. Her last is a weaner bull by Kevlar.

**Boronia U404** had nine calves in nine years before being fatally injured. Two of these calves were born in our Multiple Herd so were unidentified. Of the other seven, three were classified S while two sold as herd bulls.

**Moscow M322(P)** was handled by Pyper Page at the 2017 National Junior Show. This high \$Indexing bull is long and deep bodied. While his growth EBVs may not suggest it, he is of a moderate maturity pattern. Some high mature weight lines are not big framed but hold condition easily and weigh heavy as a result.

BENELKAY KILLJOY (P)

**ROSEVALE SCENARIO H587 (P)**

ROSEVALE SCENARIO F383 (P)

**Scenario H587(P)** has had three calves in three years and is PTIC. Montana is the first to classify S, one son sold as a herd bull to Scott and Tracy Sewell prior to classification while her last is a weaner heifer. **Scenario F383(P)** had H587 as a two-year-old before being shifted to our Commercial Herd. She has had six calves in six years and is PTIC. Apart from one herd bull son, no others have been identified.

**For an easy doing, moderate framed bull, Montana M512(P) packs a punch over the scales. Check out his weight rankings in the performance table earlier in the catalogue. Added to this, his quiet disposition, perfect sheath, square frame and sire appeal make him a young stud sire full of potential. Note that he is only 22 months old and has tested homozygous polled (PP).**

**ROSEVALE DEITY J495**

ROSEVALE DEITY F39 (P)

**Deity J495** had two calves in two years before being PTE and sold. Mario is her first while her second is a weaner bull.

**Deity F39(P)** calved first as a two-year-old, has had six calves in six years, and is PTIC. Four classified S progeny include Feremone K266(P) who sold for \$8,000 to Wes Clifford and Texan L318(P) who sold for the same amount to Darryl Newton. Her last calf is a weaner heifer.

**Mario M88(P)** is the first of a very good draft of sons by first time sire, Jackaroo. The Jackaroo sons dominate the early lots of the sale. They are growthy, easy doing, extremely well balanced and have 'SIRE' written all over them. Mario exhibits all of the characteristics mentioned and backs this up with a very good semen test result.

ROSEVALE BATTALION B150 (P)

**ROSEVALE ROSALINE G287**

ROSEVALE ROSALINE A97

**Rosaline G287** calved first as a two-year-old, has had five calves in five years, and is PTIC. Two of these have classified S while a herd bull son sold to Davidson Livestock. Her last is a weaner heifer.

**Rosaline A97** is a grand old cow. She calved first as a two-year-old, has had eleven calves in eleven years, and is PTIC. Seven of these have classified S and include Lot 46 in this sale and Jumbo J186(P) who sold to Col and Rita Jackson for \$5,500. Her last calf is a weaner heifer.

**Montgomery M406** has been a stand out in the mob for some time. While he is large framed, he retains the doing ability that is typical of the Jethro progeny who were finished a long period of time prior to the sale.

## ROSEVALE BULLS PREPARED FOR A LONG WORKING LIFE

Because we have an on-property sale at Rosevale we have the luxury of our bulls not being compared with those of other vendors. For this reason, we do not aim at a certain weight that our bulls must be at sale time. More importantly, we plan to offer a run of bulls that are well grown without being 'overdone'.

Preparing bulls off pasture means that their weights are very much governed by the seasonal conditions over the preceding period.

**Our aim is to offer bulls that are fit and healthy, backed by Breedplan EBVs that describe their genetics.**

Our regular clients know not to compare the weight and scan measurements that our bulls exhibit to those of bulls in other sales where sale preparation is totally different.

On sale day they compare the daily weight gains of the bulls to help work out which are the high performers within this group.

More and more buyers are gaining confidence in using Breedplan EBVs for the different traits to compare between herds - knowing that the information on Rosevale bulls is from a herd that is both fully and accurately recorded.

## COMPLETENESS OF RECORDING 4<sup>1/2</sup> STAR

The "Completeness of Performance" herd rating system assesses the quantity of pedigree and performance information that has been submitted to Breedplan by an individual seedstock herd.

The 1 to 5 scale of star rating is calculated based on the proportion of calves and numbers of performance traits recorded.

The Rosevale herd has a Completeness of Performance rating of 4<sup>1/2</sup> Stars which ranks the herd right up with the most comprehensively recorded herds in northern Australia.

## HOW DOES THE ROSEVALE HERD COMPARE TO THE BREED

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

The **Average Rosevale Sale Bull** ranks in the **Top 10%** of the Santa Gertrudis Breed for both:  
**Export Market Profitability**

Rosevale Bulls deliver:

- **Higher Herd Fertility**
  - **More Growth**
  - **More Muscle**
- **More Finishing Ability**
  - **More \$\$**

**ROSEVALE BORONIA B63**

ROSEVALE BORONIA Y137

**Boronia B63** is a very special cow with an extraordinary combination of traits. With an Export \$Index of +\$70 she is the highest indexing animal in the breed. Her progeny round out the top eleven places in this list. She has had eight natural calves and eleven ET and IVF calves. Ten of these, out of eleven eligible, have classified S. They include Empire E464 who is a senior sire in our Stud and Maverick M102(P) who was used as a yearling and is a young sire we have high hopes for. Two sons sold to the Franz and Atthow families to average \$6,250. **Boronia Y137** had nine calves in nine years, as did her dam before her. When extremely high fertility is stacked generation on generation, from both sides of the pedigree, the result is no fluke. **Maxwell M4(PS), along with his siblings (Lots 56 and 119), is the highest Export \$Indexing bull to sell in the breed this year. Note that he is a bit of a nervous type despite his positive Flight EBV.**

ABC A1061 (P)

**ROSEVALE E962 (PS)**

ROSEVALE B813 (P)

**ROSEVALE E1133 (P)**

**Rosevale E1133(P)** is a breeder in our Commercial Herd. This herd is run on forest country and mated for a three month period. Selected for efficient beef production with fertility being Priority #1, this herd regularly tests over 90% pregnancy rate. E1133(P) is typical of the herd. She calved first as a two-year-old, has had seven calves in seven years, and is PTIC. These include a son sold to Andrew and Kim Downes for \$4,000.

**Lorenzo L882(P)** is a typical Rosevale Red Beef Bull with an ABC composite influence. He was retained as a sire in our Commercial Herd last season. Note the extra body volume in this bull with depth, width and finishing ability being a feature. These bulls fit well into traditional herds, offering a hint of hybrid vigour, producing early maturing, heavy weight, predominately polled calves.

**ROSEVALE BORONIA B63**

ROSEVALE BORONIA Y137

**Boronia B63** is a very special cow with an extraordinary combination of traits. With an Export \$Index of +\$70 she is the highest indexing animal in the breed. Her progeny round out the top eleven places in this list. She has had eight natural calves and eleven ET and IVF calves. Ten of these, out of eleven eligible, have classified S. Her progeny include Lots 27 and 119, Empire E464 who is a senior sire in our Stud and Maverick M102(P) who was used as a yearling and is a young sire we have high hopes for. Two sons sold to the Franz and Atthow families to average \$6,250. **Boronia Y137** had nine calves in nine years, as did her dam before her. When extremely high fertility is stacked generation on generation, from both sides of the pedigree, the result is no fluke. **Exodus L600 had big scurs dehorned so there is a chance he will breed some polled calves. He was used as a sire in our Commercial Herd last season.**

ROSEVALE BORONIA B63

GYRANDA C344 (P)

**ROSEVALE MULBERRY F269 (P)**

ROSEVALE (MULBERRY) X500 (P)

**Mulberry F269(P)** calved first as a two-year-old and had six calves in six years. Two of these classified S while a herd bull son sold to Paul Mullins. The last calf she reared was an IVF calf and she was the recipient dam.

**Mulberry X500(P)** had ten calves in ten years. Five classified S progeny include a son sold to Ralph and Margot Schmidhauser.

**Empire L572(PS)** was retained as a sire in our Commercial Herd last season. Like all bulls retained as sires at Rosevale, he recorded a high %Normal semen morphology result prior to the decision being made. This is typical of the Empire line, as is the high female fertility that is demonstrated in his Days to Calving EBV which ranks him in the top five percent of the breed.

ROWANLEA ATOMIC (P)

**ROSEVALE PAT F373 (P)**

ROSEVALE PAT Y55

**Pat F373(P)** calved first as a two-year-old, has had six calves in six years, and is PTIC. Two of these have classified S to date and include Kangajang K494(P) who sold for \$15,000 to the Strathmore Stud. Her last calf is a weaner heifer.

**Pat Y55** calved first as a two-year-old and had nine calves in nine years. These include a son sold to the Cooper Family.

**Empire L576(PS)** was retained as a sire in our Commercial Herd last season. The high fertility of his dam line combines with that of Empire to give him a Days to Calving EBV that ranks him in the top one percent of the breed. This bull will improve female fertility in any herd and has the bonus of being polled.

## Settling in

While the bulls on offer have all returned a positive semen test, it is a known fact that if management changes, bull fertility levels can change. Changes that can cause stress include relocation/transport, change of diet, mixing with other cattle (especially different bulls), different stock handling techniques and personnel, exposure to new diseases and general changes in environment and temperature.

Because they are prepared on pasture, Rosevale bulls are ready to go straight out into the paddock without any letting down period. They should acclimatise quickly to varying environments as their guts are used to utilising pasture.

We believe in the principles of Low Stress Stockhandling. Our cattle are handled in a quiet way, but firmly so that they have an ability to respond to pressure in a positive way. Our bulls are generally handled in big mobs so do not have a lot of 'one on one' handling. Following sale day, single bulls are often trucked and dropped off by themselves. This is a big shock to their system and they should be handled in such a way that potential stress is reduced as much as possible.

It is a good idea to have cattle prepared for your new bull to go with on arrival, especially if he has travelled or is dropped off by himself. Holding him, alone in a yard is the worst thing you can do for your new bull. Because our fences are always in good order, our cattle respect them. For this reason you should be confident to let your new bull straight out in a paddock with other cattle so that he can relax and settle in.

## Mating

It is preferable to mate young bulls together. If they are mated with older bulls they will often be

dominated and they won't get a fair share of the calves as a result. Dominance of older bulls can also be a major factor in young bulls being injured during the mating period.

## Body Condition

The condition of working bulls is critical. The sperm production of bulls in poor condition may be impaired and semen quality compromised. Likewise, bulls that are overconditioned become unfit and once fat is laid down around the testicles sperm production is affected, sometimes forever.

Because young bulls are growing and breaking teeth they lose weight faster than mature bulls when put to work. The good thing about them in comparison to the older bulls that were sold in the past is that they learn to become active early in life and we get an extra year's work out of them. If it is at all possible, looking after your young bulls (eg. on good quality pasture) following their first mating season will help set them up for the following season and prolong their productive lifespan.

**With a full vaccination program in place, pasture preparation of our bulls, semen morphology test and after sale feeding, handling and loading service, we have done all in our power to set your new bull up for a long working life.**

We hope that the above points may help you to get the most out of your purchases once on your property. In addition to all of the above, your new bull is guaranteed fertile. If we can be of any assistance do not hesitate to call David or Grahame if you have any questions you need answered.

## SALE TOPPERS 2016

**DOWNPOUR L238** sold for \$40,000  
to Swan Hill Stud

**ROSEVALE TREASURE B171 (P)**

ROSEVALE TREASURE V237

**Treasure B171(P)** has had ten calves in nine years (including a set of twins) and is PTIC. Six classified S progeny include a bull sold to Patrick Duff at the Cunnamulla Show Sale. Herd bull sons have sold to the Crowther Family and to Davidson Livestock. Her last is a weaner bull who is drafted into the top mob.

**Treasure V237** calved first as a two-year-old and had nine calves in nine years before being culled for age.

**With the female fertility recorded above, in combination with that of the Empire line, it is no wonder that this bull is predicted to breed highly fertile progeny. Empire M328 has big scurs and looks a bit ugly as a result. This won't prevent him from passing on these critical fertility genes in the herd he is used in.**

ROSEVALE ALIX K92

ROSEVALE BEAUMON X334

**ROSEVALE BORONIA B63**

ROSEVALE BORONIA Y137

**Boronia B63** is a very special cow with an extraordinary combination of traits. With an Export \$Index of +\$70 she is the highest indexing animal in the breed. Her progeny round out the top eleven places in this list. She has had eight natural calves and eleven ET and IVF calves. Ten of these, out of eleven eligible, have classified S. They include Empire E464 who is a senior sire in our Stud and Maverick M102(P) who was used as a yearling and is a young sire we have high hopes for. Two sons sold to the Franz and Atthow families to average \$6,250. **Boronia Y137** had nine calves in nine years, as did her dam before her. When extremely high fertility is stacked generation on generation, from both sides of the pedigree, the result is no fluke.

**Exodus M2, along with his full brother (Lot 27), is the highest Export \$Indexing bull to sell in the breed this year.**

## ROSEVALE BULL SIRES GRAND CHAMPION CARCASE

Congratulations to the Adams Family of Maidenwell on winning the award for the Grand Champion Carcase from over 600 entries at the 2017 Callide Dawson Beef Carcase Competition.

Pictured is Darryl Adams receiving the award from sponsor representative Keith Lacey at the awards dinner in Biloela. (Photo courtesy of Queensland Country Life)

**Darryl** and his wife **Hayley** had shown the steer in led steer competitions but felt that he was going to grow too heavy for later shows.

Darryl, along with his grandfather and uncles **Peter Adams and Lloyd Miller** run 760 breeders in a family partnership. Genetics in the herd consist of a mix of Santa Gertrudis, Hereford, Blonde d'Aquitaine and Angus with the aim of producing pasture fed animals for the heavy export markets.

The steer with the Champion Carcase had the following statistics

Breed:	Santa/Hereford/Blonde cross		
Sire:	Rosevale Noddy G1094(P) (Purchased as Lot 157 in 2012 for \$3,000)		
Age:	21 mths (Milk Tooth)	Carcase Weight:	410kg
EMA:	120cm <sup>2</sup>	Rib/Rump Fat:	9mm/13mm

Peter Adams showed David around some of the breeding herd a few years ago. David commented, ***"The property and the cattle are an absolute credit to the family. They know their stuff and run an extremely efficient operation."***

The win is proof that carefully selected genetics can be combined to breed the very best, even within a conservative budget.

## HOWSE FAMILY WEANERS LIGHT UP ROMA SALE

Ron and Debra Howse of "Waverley", Wallumbilla run a Santa Gertrudis/Charolais cross herd. In the last few years they have been marketing their cattle as weaners.

On May 28th, 2017 they sold their annual run of weaners through the Roma Store Sale to levels that they had not seen before. Their 95 steer calves sold for 371c/kg at an average of 339kg to return \$1,262/head. The heifer portion of 62 head sold for 355c/kg at an average of 296kg to return \$1,050/head.

Ron and Debra have been using Rosevale bulls for many years. They purchase easy doing, meaty bulls to complement the Charolais side of their cross-breeding program and are prepared to select out of the top end of the commercial bulls. They are pictured with Steven Goodhew of agent PJH. (Photo courtesy of QCL)

Congratulations Ron and Debra - you were well rewarded for quality cattle.

**ROSEVALE E962 (PS)**

ROSEVALE B813 (P)

**Rosevale E1179** has had six calves in six years and is PTIC. Three sons include Arizona J978 who sold to Rob and Virginia Warby and Family for \$3,500.

**M948(PS)** is a typical Rosevale Red Beef Bull with an ABC composite influence. Note the extra body volume in this bull with depth, width and finishing ability being a feature. His high %Normal semen morphology result is also common in this bloodline. These bulls fit well into traditional herds, offering a hint of hybrid vigour, producing early maturing, heavy weight, predominately polled calves.

ROSEVALE MARGOT F1055 (P)

**Margot H533(P)** had three calves in four years. These include a son who sold to Scott and Tracy Sewell.

**Margot F1055(P)** has had six calves in six years and is PTIC. Three of these have classified S and include Harlequin L376 who sold to Simmons Cattle Co for \$7,500. Herd bull sons have sold to the Skinner Family and to David and Stacey Keane. Her last calf is a weaner heifer.

**Note the very young age of this bull - he has all of his life ahead of him. His strong polled pedigree has resulted in him being tested as homozygous polled (PP).**

16 months

ROSEVALE BANDITO B8

**ROSEVALE BANDITO E306**

ROSEVALE NARISSA Z195 (P)

**Bandito M1192's** dam is a purebred Shorthorn cow. She calved first as a two-year-old and has had six calves in six years. This is her first son to be retained and offered as a bull.

**Note the very young age of this bull - he has a lot of life ahead of him. Like his mate who sells as the following lot, Bandito M1192 is a real beef bull with a tremendously thick topline. Both of these bulls are quieter than their flight time measurements suggest.**

### **Rosevale bulls are available all year round.**

In addition to the annual sale bulls, over 200 bulls are sold privately at Rosevale each year. These bulls are grown out on pasture and fodder crops so that they are ready to work in any environment at any time.

### **Currently for Sale:**

- *90 rising two-year-old bulls as at August 6th, 2017*
  - *Priced at \$3,000 +GST*
  - *Including Rosevale Red Beef Bulls with a percentage of British and European blood*
  - *Fully Performance Recorded*
  - *Pasture Prepared*
  - *65% Natural Polls*
  - *Vaccinated for Redwater with 3-germ blood*
  - *Vaccinated for BEF (3-day sickness)*
- 
- **Bulls selected prior to September 26th, 2017 can remain at Rosevale until sale day. Buyers of these bulls will have the option of purchasing bulls at the annual sale with selected Private Sale bulls acting as a back-up.**
  - **Ask us about this option.**

## LET US HELP YOU

Sale day is very busy and the pressure of time makes it difficult for visitors to select through the cattle on offer and easily identify those that best suit their situation. We try to help out as many potential buyers as we can on the day but it is difficult to meet with everyone.

In order to make this job easier we would be more than happy to put together a shortlist of bulls that could best suit your operation. If you would like us to help you out, please answer the questions below which will help us understand what your requirements are.

Once completed, please either scan or copy the form and send to David and Sonya via email: [rosevalesanta@bigpond.com](mailto:rosevalesanta@bigpond.com)
